NEWS	1		Web Page URLs for STN Seminar Schedule - N. America
NEWS	2	Dec 17	The CA Lexicon available in the CAPLUS and CA files
NEWS	3	Feb 06	Engineering Information Encompass files have new names
NEWS	4	Feb 16	TOXLINE no longer being updated
NEWS	5	Apr 23	Search Derwent WPINDEX by chemical structure
NEWS	6	Apr 23	PRE-1967 REFERENCES NOW SEARCHABLE IN CAPLUS AND CA
NEWS	7	May 07	DGENE Reload
NEWS	8	Jun 20	Published patent applications (A1) are now in USPATFULL
NEWS	9	JUL 13	New SDI alert frequency now available in Derwent's DWPI and DPCI
NEWS	10	Aug 23	In-process records and more frequent updates now in MEDLINE
NEWS	11	Aug 23	PAGE IMAGES FOR 1947-1966 RECORDS IN CAPLUS AND CA
NEWS	12	Aug 23	Adis Newsletters (ADISNEWS) now available on STN
NEWS	13	Sep 17	IMSworld Pharmaceutical Company Directory name change to PHARMASEARCH
NEWS	14	Oct 09	Korean abstracts now included in Derwent World Patents Index
NEWS	15	Oct 09	Number of Derwent World Patents Index updates increased
NEWS	16	Oct 15	Calculated properties now in the REGISTRY/ZREGISTRY File
NEWS	17	Oct 22	Over 1 million reactions added to CASREACT
NEWS	18	Oct 22	DGENE GETSIM has been improved
NEWS	19	Oct 29	AAASD no longer available
NEWS	20	Nov 19	New Search Capabilities USPATFULL and USPAT2
NEWS	21	Nov 19	TOXCENTER(SM) - new toxicology file now available on STN
NEWS	22	Nov 29	COPPERLIT now available on STN
NEWS	23	Nov 29	DWPI revisions to NTIS and US Provisional Numbers
NEWS	24	Nov 30	Files VETU and VETB to have open access
NEWS	25	Dec 10	WPINDEX/WPIDS/WPIX New and Revised Manual Codes for 2002
NEWS	26	Dec 10	DGENE BLAST Homology Search
NEWS	27	Dec 17	WELDASEARCH now available on STN
NEWS	28	Dec 17	STANDARDS now available on STN
NEWS	29	Dec 17	New fields for DPCI
NEWS	30	Dec 19	CAS Roles modified
NEWS	31	Dec 19	1907-1946 data and page images added to CA and Caplus

FILE COVERS 1907 - 24 Dec 2001 VOL 135 ISS 26  
FILE LAST UPDATED: 23 Dec 2001 (20011223/ED)

This file contains CAS Registry Numbers for easy and accurate

substance identification.

This file supports REGISTRY for direct browsing and searching of all substance data from the REGISTRY file. Enter HELP FIRST for more information.

CAPLUS now provides online access to patents and literature covered in CA from 1907 to the present. Bibliographic information and abstracts were added in 2001 for over 3.8 million records from 1907-1966.

CAS roles have been modified effective December 16, 2001. Please check your SDI profiles to see if they need to be revised. For information on CAS roles, enter HELP ROLES at an arrow prompt or use the CAS Roles thesaurus (/RL field) in this file.

The CA Lexicon is now available in the Controlled Term (/CT) field. Enter HELP LEXICON for full details.

Attention, the CA Lexicon is the copyrighted intellectual property of the American Chemical Society and is provided to assist you in searching databases on STN. Any dissemination, distribution, copying, or storing of this information, without the prior written consent of CAS, is strictly prohibited.

OS MARPAT 131:345771

AB The present invention relates to novel metal **chelates**, exemplified as technetium-99m or rhenium **chelates**, and to the process of prepg. such metal **chelates** from corresponding ligands. These ligands and their corresponding metal **chelates** were synthesized to have a cysteinylethylene (EC) structure, a monothiourea (MTU) structure, or a dithiourea (DTU) structure. Thus, 99mTcO(CEMA) [H3CEMA = HSCH2CH(COOH)NHCH2CH2NHC(O)CH2SCH2Ph], was prepd. and biodistribution studied for four isomeric forms of the complex (syn- and anti-, D and L). The present invention further relates to a pharmaceutical compn. comprising a metal **chelate**, for example, a 99Tc-**chelate**, to the use of the compn. for renal imaging and examn. of renal function, and to a kit for prepg. such a compn. prior to use.

I

AB The present invention relates to novel metal **chelates**, exemplified as 99mTc or Re **chelates**, and to the process of prepg. such metal **chelates** from corresponding ligands. Claimed are metal **chelates** which have a cysteinylethylene (CE) structure I (R1-R10 = H, C1-4 alkyl, A-CO2H where A = C0-4; R5R6, R7R8, R9R10 = O,

Z = CH2S, or 2-pyridyl, 2-pyrazinyl derivs., CH2NH, etc., M = Tc, Re, Cd, Pb, Zn, Hg, Ag, Au, Ga, Pt, Pd, Rh, Cr, V). The invention also provides metal **chelates** based upon a thioacetamidethiourea structure or dithiourea structure. General synthetic procedures for the ligands and for 99Tc and Re complexes are given in the examples with reaction schemes.

The ligands need not exist in a stereoisomeric form. The present invention further relates to a pharmaceutical compn. comprising a metal **chelate**, e.g., a 99 Tc-**chelate**, to the use of the compn. for renal imaging and examn. of renal function, and to a kit for prepg. such a compn. prior to use.

FILE LAST UPDATED: 23 Dec 2001 (20011223/ED)

This file contains CAS Registry Numbers for easy and accurate substance identification.

This file supports REGISTRY for direct browsing and searching of all substance data from the REGISTRY file. Enter HELP FIRST for more information.

CAPLUS now provides online access to patents and literature covered in CA from 1907 to the present. Bibliographic information and abstracts were added in 2001 for over 3.8 million records from 1907-1966.

CAS roles have been modified effective December 16, 2001. Please check your SDI profiles to see if they need to be revised. For information on CAS roles, enter HELP ROLES at an arrow prompt or use the CAS Roles thesaurus (/RL field) in this file.

The CA Lexicon is now available in the Controlled Term (/CT) field. Enter HELP LEXICON for full details.

Attention, the CA Lexicon is the copyrighted intellectual property of the American Chemical Society and is provided to assist you in searching databases on STN. Any dissemination, distribution, copying, or storing of this information, without the prior written consent of CAS, is strictly prohibited.

AB	The title inorg. glasses are manufd. from metal elements and metal complexes with ligand contg. super-branched mol. structure. The metal elements are non-clustering atoms or cations and dispersed in inorg. glass matrixes. The inorg. glasses contain 0.01-10 mol.% (vs. total cations) the above dispersed metal elements. The inorg. glasses are suitable for <b>fluorescent</b> materials, optical recording materials, etc.

AB The intermol. energy transfer from the arom. monoketones to rare earth ions (Eu<sup>3+</sup>, Tb<sup>3+</sup>) in acetone soln. were investigated using **fluorescence** excitation and emission spectroscopies. The lowest triplet of arom. ketones must be higher than the excited state of rare earth ions if the energy transfer takes place. The energy dependence is  
a necessary condition. Also other factors such as the nature of the substituent attached to the benzene and steric effect will greatly influence the efficiency and the occurrence of energy transfer.

GI

AB The present invention provides complexing agents of Formula (I) which contain novel photosensitizers and produce long-lived **fluorescence** for use in bioaffinity assays, esp. HTRF (homogeneous time-resolved **fluorescence**) assays. Thus, 3AAP-DTPA-4APEA (I; R1 = NH-C6H4-3-COCH3, R2 = NHCH2CH2-C6H4-4-NH2) was prepd. and **fluorescence** lifetimes of its **Eu**(III) and **Tb** (III) chelates measured.

OS CASREACT 98:218134

AB Stable **fluorescent** chelates are manufd. comprising a complex of a lanthanide metal and a chelating agent that includes a moiety that is a triplet sensitizer having a triplet energy greater than that of the lanthanide metal and at least 2 heteroatom-contg. groups that form coordinate complexes with lanthanide metals and a 3rd heteroatom-contg. group or heteroatom in or appended to the triplet sensitizer. Thus, a benzoylhydroxybis(N,N-bis(carboxylate)aminomethyl)coumarin-**Eu** chelate was used with an anal. test element contg. ovalbumin and normal rabbit serum and the **fluorescence** signal was a function of the concn. of the **Eu** chelate. The chelate is useful to label a variety of physiol. active materials by binding them to the complex by adsorption or by covalent bonding. The materials are esp. useful in specific binding assay methods.

GI

AB The present invention provides complexing agents of Formula (I) which contain novel photosensitizers and produce long-lived fluorescence for use

in bioaffinity assays, esp. HTRF (homogeneous time-resolved fluorescence) assays. Thus, 3AAP-DTPA-4APEA (I; R1 = NH-C6H4-3-COCH3, R2 = NHCH2CH2-C6H4-4-NH2) was prepd. and fluorescence lifetimes of its **Eu**(III) and **Tb**(III) chelates measured.

 DT Journal  
 LA Russian  
 AB The possibility of the detn. of aldehydes and ketones by the luminescence of rare earth elements appearing as a result of excitation energy transfer from org. compds. to the rare earth ions was studied. Acetophenone ( $4 \times 10^{-7}$ – $4 \times 10^{-4}$  g/mL) can be detd. by the luminescence of **Eu** and **Tb**. The detection limit when Dy is used is  $4 \times 10^{-5}$  g/mL. Sm cannot be used. The simultaneous detn. of m- and p-aminoacetophenone was studied. The meta isomer ( $4.5 \times 10^{-7}$ – $4.5 \times 10^{-4}$  g/mL) can be detd. in the presence of the para isomer by the luminescence of **Eu**;  $4.5 \times 10^{-7}$ – $4.5 \times 10^{-4}$  g/mL of the para isomer can be detd. by using **Tb**, while the sensitivity for the detn. of the meta isomer is 1 order lower. The std. deviation is  $1.3 \times 10^{-5}$  and  $3.0 \times 10^{-6}$  g/mL for the para isomer and  $3.3 \times 10^{-6}$  and  $6.0 \times 10^{-6}$  g/mL for the meta isomer at concns. of  $4.50 \times 10^{-5}$  and  $6.75 \times 10^{-5}$  g/mL, resp.

 AB The paramagnetic shift parameters of para- and meta-substituted PhNH<sub>2</sub> and deuterated derivs. induced by tris(dipivalomethanato)**europium** were measured. The obsd. shift values of the substituted compds. were linearly related with the substituent consts. The slope ratio of the deuterated to the undeuterated compds. was 1.35 and the shift parameters of the deuterated compds. was greater than those of the undeuterated compds.

 LA Chinese  
 AB The intermol. energy transfer from the arom. monoketones to rare earth ions (Eu<sup>3+</sup>, Tb<sup>3+</sup>) in acetone soln. were investigated using fluorescence excitation and emission spectroscopies. The lowest triplet of arom. ketones must be higher than the excited state of rare earth ions if the energy transfer takes place. The energy dependence is a necessary condition. Also other factors such as the nature of the substituent attached to the benzene and steric effect will greatly influence the efficiency and the occurrence of energy transfer.

CAPLUS now provides online access to patents and literature covered in CA from 1907 to the present. Bibliographic information and abstracts were added in 2001 for over 3.8 million records from 1907-1966.

CAS roles have been modified effective December 16, 2001. Please check your SDI profiles to see if they need to be revised. For information on CAS roles, enter HELP ROLES at an arrow prompt or use the CAS Roles thesaurus (/RL field) in this file.

The CA Lexicon is now available in the Controlled Term (/CT) field. Enter HELP LEXICON for full details.

Attention, the CA Lexicon is the copyrighted intellectual property of the American Chemical Society and is provided to assist you in searching databases on STN. Any dissemination, distribution, copying, or storing of this information, without the prior written consent of CAS, is strictly prohibited.

AB Methods and kits for structurally analyzing carbohydrate mols. are taught.

Carbohydrates for anal. are derivatized (preferably methylated) and then hydrolyzed into constituent monosaccharides. The derivatized monosaccharides are then labeled by a fluorophore and sepd. from one

another by electrophoresis. The identity of derivatized monosaccharides is established by comparison with identification stds. The electrophoresis sepn. patterns may be visualized by a charged coupled device camera or **photog.** Oligosaccharides were methylated, hydrolyzed, reacted with 8-amino-1,3,5-naphthalenetrisulfonic acid, disodium salt, and analyzed by PAGE. The fluorescent gel bands were imaged by CCD camera.

AB The present invention provides for the use of the fluorescent label 2-aminoacridone for use in sepg. carbohydrate mixts. and analyzing the structure of carbohydrates. Carbohydrates for anal. may be labeled by 2-aminoacridone and subsequently sepd. from one another by electrophoresis. The electrophoresis may be in one or two dimensions. Band produced by the electrophoresis may be visualized and quantitated directly by UV illumination or by a charge coupled device for **photoelec.** detection. 2-aminoacridone labeling of carbohydrate may also be used to analyze the structure of carbohydrates by cleaving (or adding to) various 2-aminoacridone labeled carbohydrates. The subject invention also provides for kits for performing 2-aminoacridone labeling and electrophoresis.

AB In the preferred embodiment, the method and app. (schematics included) allow the detn. of the base sequence of a nucleic acid by detg. the mol. wts. of the components of a biol. sample. The method uses either a pre-existing chromophore or the covalent attachment of an ionizable chromophore to a biol. sample, followed by vaporization of these mols. by exposure to an intense pulse of electromagnetic radiation in the presence of a matrix which strongly absorbs the radiation. The gaseous mols. are subsequently extd. into an an evacuated ionization chamber and then exposed to electromagnetic radiation at a wavelength which specifically excites the chromophore covalently attached to the biol. sample. In the case of DNA, the invention uses (1) laser vaporization methods to desorb liq. phase DNA strands into the gas phase; (2) pulsed mol. beam nozzle techniques to transport the gas-phase strands from a flowing He atm. into the vacuum system; (3) laser ionization methods to resonantly ionize a label mol. on each DNA strand; and (4) time-of-flight mass spectrometric methods for high mass anal. Extremely large DNA mols. can be efficiently vaporized without any noticeable strand cleavage or degrdn.

Radioisotopes  
and electrophoresis are not required.
